Protective gloves against chemicals (EN 374). The glove material has to be impermeable and resistant to the product / the substance / the preparation. Please follow the instructions related to the permeability and the penetration time provided by the manufacturer. Choosing the proper glove is a decision that depends not only on the type of material, but also on other quality features, which differ for each manufacturer. The information is based on our own experience, literature references, and information from glove manufacturers, or derived by analogy from similar substances. It should be noted that the daily usage time of a chemical-resistant glove in practice can be significantly shorter than the permeation time determined by tests due to numerous influencing factors (e.g. temperature). Wear protective gloves.
